Exam : **MS-301**

Title : Deploying SharePoint
Server Hybrid

Version : DEMO

1. Topic 1, Litware inc

Overview

Existing Environment

Active Directory

The network contains an Active Directory forest named litwareinc.com. The forest contains a single domain. All domain controllers run Windows Server 2016.

SharePoint Server Environment

Litware has a SharePoint Server 2019 farm that contains the servers shown in the following table.

Name	Configuration
SPWEB1	Front-end server
SPWEB2	Front-end server
SPCACHE1	Distributed cache server
SPAPP1	Application server
SPSEARCH1	Search server
SPSEARCH2	Search server
SQLSVR1	Microsoft SQL Server
SQLSVR2	Microsoft SQL Server

Central Administration has a URL of http://spweb1.litwareinc.com.

The HR department currently uses a SharePoint web application that uses only forms authentication.

The sales department has a SharePoint site that is available anonymously to display product information.

Line-of-Business Application

You have a line-of-business application named LOBApp. LOBApp stores content in a SQL Server database named LOBAppDB.

LOBApp has a service account named LobAppSA.

Problem Statements

Litware identifies the following issues:

- None of the SharePoint sites use TLS.

- The Distributed Cache Problem service uses the farm account.

- When users perform searches from the SharePoint site of the HR department, they receive no results.

- You discover that the user names and passwords configured for managed services were transmitted on the network in plain text.

Requirements

Business Goals

All the components in the SharePoint Server farm must be highly available by using the least number of servers possible.

Each document stored in the HR department site must have the following pieces of metadata: CONID,

CONNO, CONDate, and CONApproved.

Security

The farm uses the managed service accounts shown in the following table.

Account name	Description
Spfarm	Farm account
SpContent	SharePoint content database account
SpServices	SharePoint service account
SpSecureStore	SharePoint Secure Store Service account
SpBI	SharePoint Business Intelligence
LOBAppSA	Content access account for LOBApp

Technical Requirements

Litware identifies the following technical requirements:

- LOBApp content must be visible in search results.

- The principle of least privilege must be used whenever possible.

- All SharePoint service applications must use the SpServices account.

- Information for each product must be displayed as a separate webpage for the sales department.

- Search crawling must start every 10 minutes, regardless of whether the prior session is

complete.

- The Cloud Search Service Application must crawl on-premises content in a cloud hybrid search solution.

- The Secure Store Service application must use LitwareAppID as the target application to access

LOBAppDB.

Which feature should you activate for the sales department?

A. SharePoint Server Standard Site Collection features

B. Site Policy feature

C. SharePoint Server Enterprise Site Collection features

D. SharePoint Server Publishing Infrastructure

Answer: D

2.HOTSPOT

You need to configure the crawl settings to meet the technical requirements.

How should you complete the PowerShell script? To answer, select the appropriate options in the answer

area. NOTE: Each correct selection is worth one point.

```
$ssa =        [ ▼ ]
              Get-SPEnterpriseSearchCrawlContentSource
              Get-SPEnterpriseSearchServiceApplication
              Get-SPEnterpriseSearchTopology
```

```
$ssa.SetProperty    [ ▼ ] ",10)
("                  CaseSensitiveCrawling
                    ContinuousCrawlInterval
                    CrawlState
                    IncrementalCrawlSchedule
                    SPPartitionOptions
```

Answer:

```
$ssa =        [ ▼ ]
              Get-SPEnterpriseSearchCrawlContentSource
              Get-SPEnterpriseSearchServiceApplication
              Get-SPEnterpriseSearchTopology
```

```
$ssa.SetProperty    [ ▼ ] ",10)
("                  CaseSensitiveCrawling
                    ContinuousCrawlInterval
                    CrawlState
                    IncrementalCrawlSchedule
                    SPPartitionOptions
```

```
$ssa =        [ ▼ ]
              Get-SPEnterpriseSearchCrawlContentSource
              Get-SPEnterpriseSearchServiceApplication
              Get-SPEnterpriseSearchTopology
```

```
$ssa.SetProperty    [ ▼ ] ",10)
("                  CaseSensitiveCrawling
                    ContinuousCrawlInterval
                    CrawlState
                    IncrementalCrawlSchedule
                    SPPartitionOptions
```

3.DRAG DROP

You need to meet the technical requirements for searching the LOBApp content.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Create an external content source

Create an external content type

Create a content type hub

Create a document set

Configure permissions for the search crawl account

Answer Area

Answer:

Actions

Create an external content source

Create an external content type

Create a content type hub

Create a document set

Configure permissions for the search crawl account

Answer Area

Create an external content type

Configure permissions for the search crawl account

Create an external content source

4.You need to recommend changes to the existing environment to support the minimum high-availability SharePoint Server farm. The solution must minimize costs.

Which three changes should you recommend? Each correct answer presents part of the solution. NOTE: Each correct selection is worth one point.

A. Change the role of SPWEB1 and SPWEB2 to Front-end with Distributed Cache.

B. Change the role of SPSEARCH1 and SPSEARCH2 to Application with Search.

C. Remove SPCACHE1 and SPAPP1 from the farm.

D. Change the role of SPCACHE1 to Single-Server Farm.

E. Change the role of SPAPP1 to Single-Server Farm.

F. Remove1 SPWEB1 and SPSEARCH1 from the farm.

Answer: A,B,C

5.You need to resolve the issues related to passwords being transmitted over the network.

What should you do?

A. Configure the SQL servers to use TLS.

B. Configure Central Administration to use forms authentication.

C. On SPWEB1, configure a firewall rule that allows outbound traffic on TCP port 443.

D. Configure Central Administration to use Secure Sockets Layer (SSL).

Answer: A
